

Science Fiction Story

Things you **should include** in your science fiction story;

- Why are you visiting Earth?
- What did you learn from your visit to Earth? ***(If you get stuck on this one, use something you learned during the year in science that you didn't know before 6th grade began).**
- What was your favorite thing about Earth?
- What was your least favorite thing about Earth?
- Do you plan to return to Earth?
- Will you be taking any **souvenirs** from Earth back to your planet with you? If yes, what will you take and why?
- Will you leave anything behind on Earth? If yes what will you leave and why?

Things you **must include** in your science fiction story;

- How did you prepare for your trip to Earth?
- What did you pack for your trip to Earth?
- How old were you when you left for your trip to Earth?
- How long did it take you to get to Earth from your planet? ***(this cannot be fictional)**
- How long did you stay on Earth?
- How did you prepare for your return home to your planet?
- How long did it take you to return home to your planet? ***(this cannot be fictional)**
- How old will you be when you return home to your planet?

*This part of the project incorporates math. Your math must “add up” (must be correct) when calculating the age your alien left its planet, how long your alien stayed on Earth, and how old your alien was when he/she returned to the home planet etc.

*Incorporate the answers to the research questions in your story. This will make it more interesting and easier for you to write.
